

Cover Letter — Actuarial Consultant, Experience Studies & Structured Solutions

Munich Re Korea | Job ID: 13244

Dear Hiring Manager,

I am writing to express my strong interest in the Actuarial Consultant, Experience Studies & Structured Solutions position at Munich Re Korea. With over eight years of hands-on experience in actuarial modelling, IFRS 17 system implementation, K-ICS capital strategy, and AI-driven process automation across Korea's leading insurers, I am confident that my profile aligns closely with what this role demands.

Experience Studies & Actuarial Modelling

Throughout my career, the core of my actuarial work has centred on developing, maintaining, and validating actuarial models for valuation and regulatory reporting. At SiG Partners, I owned the full implementation lifecycle of Shinhan Life's IFRS 17 closing system and actuarial assumption platform — a four-year engagement that gave me deep, hands-on experience in model development, input data preparation and validation, and leading quarterly reporting processes including valuation, monitoring, and continuous improvement. This experience maps directly to Munich Re's requirement for developing and maintaining actuarial models used for experience studies and supporting quarterly reporting processes such as Solvency II and valuation.

Structured Solutions & Capital Management

At PwC, I have worked extensively on structured risk management solutions for Korean life insurers. For IBK Pension Insurance, I led the development of a five-year K-ICS ratio enhancement roadmap incorporating dynamic ALM strategies and optimised investment portfolio allocation. For NongHyup Life Insurance, I architected an ALM strategy that successfully mitigated P&L impact under a rising interest rate environment. These engagements required precisely the kind of analysis that underpins structured reinsurance solutions — understanding client-specific capital, tax, and volatility considerations and structuring transactions that meet both client needs and internal profitability targets.

APAC Reinsurance Market Exposure

My engagement with Samsung Re's Singapore core system upgrade provided direct exposure to the reinsurance market and cross-border APAC dynamics. I led the architectural design and bridged communication between Korean headquarters and international stakeholders across the Asia Pacific region, translating diverse business requirements into a unified technical strategy. This experience gives me a practical understanding of the regional landscape that Munich Re's Korea team operates within.

Technical Proficiency

I bring strong proficiency in Python for data manipulation, analysis, and automation — demonstrated through AI-powered workflow transformation at Samsung Fire & Marine, where I adapted an LLM to automate key P&C risk engineering and claims processes using Python-based data pipelines. Combined with my SQL skills and experience building data validation frameworks for actuarial model inputs, I am well-equipped to contribute to Munich Re's data analytics initiatives from day one.

Korean Market Knowledge

Having spent my entire career advising Korea's largest insurers — including Samsung Fire & Marine, Shinhan Life, Kyobo Life, NongHyup Life, and IBK Pension — I possess a thorough understanding of the Korean insurance market, its regulatory environment (IFRS 17, K-ICS, FSS guidelines), and the competitive dynamics that shape reinsurance pricing decisions.

I am deeply attracted to Munich Re's position at the intersection of technical actuarial excellence and innovative structured solutions, and I am excited by the opportunity to contribute to both experience studies and the development of non-traditional reinsurance solutions in the Korean market. I would welcome the opportunity to discuss how my background can support Munich Re Korea's objectives.

Thank you for your consideration.

Sincerely,

Seungmin Han 010-5233-0559 | sih5231@gmail.com Seoul, Republic of Korea
